Supplementary Image 2. Sequence similarity between SILVA 108 Scardovia, Parascardovia, Rothia, Actinomyces, and Actinomycetales reference sequences in the V4-V5 region. Shown is a heatmap of sequence similarity in the V4V5 region for reference sequences belonging to the genera *Scardovia*, *Parascardovia*, *Rothia*, Actinomyces, and Actinomycetales in the SILVA 108 database. Grey boxes represent sequence comparisons involving Parascardovia with less than 90% sequence identity.
